EDUCATION

Georgia Institute of Technology, Atlanta, GA

January 2024 – Present

Master of Science in Computer Science

Specialized in Computing Systems and Computational Perception

Stony Brook University, Stony Brook, NY

January 2019 – December 2022

Bachelor of Science in Applied Mathematics and Statistics

SKILLS

Language: TypeScript, JavaScript, SQL, C#, Python

Framework/Library: Vue.js, Next.js, Node.js, Django

Database: OracleDB, MySQL, PostgreSQL

DevOps & Tools: Git, Docker, AWS, Tomcat, Apache

EXPERIENCES

ComGen America, Software Engineer, Auburn, AL

February 2023 – Present

- Designed, developed, and supported production software systems for logistics, shipping, EDI, WMS, and JIS operations across manufacturing and supplier workflows.
- Built an AWS-hosted Python socket client to securely exchange production data with a partner socket server through IPsec VPN connectivity.
- Implemented socket data ingestion workflows that parsed message segments, stored structured transaction records in Oracle, and exposed readable data for operations users.
- Developed EDI parsing applications using Python, C#, Oracle, CData Arc, AS2, and SFTP to process partner files and convert raw EDI segments into relational database records.
- Created Oracle views and database structures to make EDI and JIS transaction data searchable, readable, and usable for business users.
- Developed WMS and shipping applications using TypeScript, Vue 3, Python, Django, SQL, and Oracle to support order creation, modification, shipment confirmation, ASN generation, and delivery document printing.
- Migrated legacy Visual Basic, C#, and .NET applications into modern TypeScript/Vue and Python/Django applications while maintaining production continuity.
- Managed production infrastructure and integration tasks, including HTTPS migration, SSL certificate renewal, AS2 setup, firewall coordination, and partner connectivity troubleshooting.
- Troubleshoot production issues across application, database, network, and firewall layers, including TCP resets, firewall timeouts, routing issues, and partner transmission failures.
- Designed, developed, and deployed an internal intranet platform using TypeScript, Vue 3, Python, Django, Docker, and Synology NAS to replace manual Excel and document-based workflows.

Army at the Republic of Korea, Sergeant, South Korea

January 2020 – August 2021

- Experienced Significant leadership experience managing 12 soldiers; responsibilities included managing soldiers' onboarding/education and leadership development.

PROJECTS

Personal Website

- Description/Objective: Ongoing development of a personal portfolio & blog platform.
- Built a fully responsive user interface using Next.js, TypeScript, and dynamic routing.
- Deployed on Vercel for continuous integration and quick iteration.

Buzzbid Auction Platform (Georgia Tech Bidding Project)

- Built a full-stack auction platform using React, Node.js, and MySQL, including item listing, search, bidding, authentication, role-based access, and admin reporting.
- Designed the ERD and implemented database-backed workflows for buyers, sellers, and administrators.
