SKILLS

Language: TypeScript/JavaScript, Python, SQL

Framework/Library: React, Django, [Node.js](#), Vue.js, Next.js

Database: OracleDB, PostgreSQL, MySQL

DevOps & Tools: Git, Docker, AWS, Tomcat, Apache, Google Cloud Run

EXPERIENCES

ComGen America, Software Engineer, Auburn, AL

February 2023 – Present

- Owned logistics and manufacturing features end to end, translating business requirements into TypeScript/Vue interfaces, Node.js and Python services, Oracle database logic, production releases, and post-deployment support.
- Worked with client stakeholders to design workflows for shipping, EDI, WMS, JIS, inventory, part confirmation, and production planning.
- Developed WMS and shipping workflows for planning lookup, order creation, part validation, ASN generation, and shipping-document output, including labels, picking sheets, and DCRs.
- Built and maintained B2B integration pipelines across five external partner environments using AS2, SFTP, Python, C#, Oracle, and CData Arc for manufacturing and shipping transactions.
- Improved EDI ingestion performance by approximately 40% by replacing sequential document processing with staged bulk loading using temporary tables, indexing, validation, and transactional inserts.
- Modernized legacy C#/.NET applications into TypeScript/Vue interfaces backed by Node.js and Python services, improving maintainability and standardizing application development across the team.
- Migrated socket-based partner integrations from on-premises servers to AWS using EC2, VPC, S3, IAM, and CloudWatch; configured VPC networking and routing, established and troubleshoot Site-to-Site VPN tunnels with client networks, and enabled cloud-based connectivity monitoring.
- Strengthened production operations with real-time dock monitoring, structured logging, actionable error codes, health checks, and user-facing troubleshooting guidance.

Republic of Korea Army, Sergeant, South Korea

January 2020 – August 2021

- Experienced in leadership, managing 12 soldiers; responsibilities included managing soldiers' onboarding/education and leadership development.

EDUCATION

Georgia Institute of Technology, Atlanta, GA

January 2024 – Present

Master of Science in Computer Science (OMSCS)

Specialized in Computing Systems

Stony Brook University, Stony Brook, NY

January 2019 – December 2022

Bachelor of Science in Applied Mathematics and Statistics

PROJECTS

Picking Up | Full-Stack Task and Routine Planner | [Link](#)

- Built daily, weekly, and monthly planning workflows for desktop and mobile web, including agenda and timeline views, full-screen task editing, drag-to-reorder and reschedule interactions, and optimistic state reconciliation.
- Moved multi-step task changes such as nesting, rescheduling, and reordering from separate client requests into server-side operations, so each action completes as one operation or returns a conflict when based on an older task version.
- Implemented email/password and Google sign-in through a Next.js BFF, with JWTs stored in HTTP-only cookies, endpoint-specific rate limits, production proxy checks, and conflict handling for concurrent registration and account-linking requests.
- Deployed the Next.js frontend and BFF on Vercel, a Dockerized Django API on Google Cloud Run, and PostgreSQL on Neon

Buzzbid Auction Platform | Georgia Tech Bidding Project

- Built a full-stack auction platform using React, Node.js, and MySQL, including item listing, search, bidding, authentication, role-based access, and admin reporting.
- Designed the ERD and implemented database-backed workflows for buyers, sellers, and administrators.
